

Risks Associated with Unauthorized-Entry Due to Multifamily Package Deliveries

Risks

- High package delivery volume in multifamily buildings
- Residents buzzing in unknown people
- Frequent courier access
- Visible packages in unsecured areas

Risk Outcomes

- Increased unauthorized entry
- Increased access to hallways, common areas, and units
- Increased access to packages

Risk-Reduction Mechanism

Secure package-delivery containers reduce unauthorized entry by:

1. Eliminating the need for residents to buzz in unknown people (“I’m delivering a package!”)
2. Reducing delivery courier access to residential hallways
3. Removing visible targets offenders use to justify approaching the building

Outcome of Installing Secure Package Delivery Containers

1. Residents stop buzzing in unknown people
2. Reduced loitering around entrances and vestibules
3. Reduced hallway access by non-residents
4. Resident safety perception improves
